

# NEW AHS UPDATE

SRC Communications Group  
Newsletter 8– September 2016

## Progress since last visit

Mrs Reid having her fingerprint taken

It was very exciting to have our fingerprints taken so that we could get through the security gates to the building site.

Wood cladding

Windows going in

The outside of the school is looking good, with most of the glass in and the cladding starting to go up. The cladding is made of thermally modified Ayous hardwood which has been chosen to suit Shetland weather. We were very lucky to be able to go up onto the roof space where Mrs Reid would like to put a telescope. Landscaping is also well ahead and the car park is being marked out for car spaces.

Up on the roof

Inside the school things are really beginning to take shape, with partition walls up on the south side of the school and classrooms now becoming obvious. It is hoped to have the entire school wind and watertight by October. We went inside some of the maths classrooms and they are huge! The glass roof is now in place and this allows lots of light into the library and atrium areas.

## The Hostel

The hostel with windows going in

The hostel bedrooms are also partitioned off now and these are well designed rooms with a good use of space. There are lots of single rooms and a few twin rooms. The same wood will be used for cladding the school and the Hostel.
